                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB46435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 11
by (I); (b) an expression cassette (EC) containing (I) linked to one or more regulatory sequences; (c) a vector containing (I) and EC; (d) organisms containing (I), EC or the vectors of (c); (e) preparation of unsaturated fatty acids (A) or triglycerides (TG) with increased content of (A) by introducing (I) or EC into an oil-producing organism; (f) proteins (IIa) of 172 aa or 178 aa (given in the specification); (g) production of (A) or TG by using (Ia); and (h) (A) and TG produced by method (g). (I) are used to produce transgenic plants (or other organisms) that produce oils or triglycerides (TG) with increased content of unsaturated fatty acids (A) and to isolate related sequences by nutrition (e.g. Infant foods), animal feeds, pharmaceuticals and cosmetics. Derivatives of (I), e.g. antisense sequences or ribozymes, can be used to suppress expression of (II), resulting in oils with
                                                                                                                                                                                                                     This invention describes a novel isolated nucleic acid (I) encoding polypeptides (II) with Delta6-acetylenase and/or Delta6-desaturase activity. The invention also describes (a) amino acid sequences encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  transgenic cosmetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          formulae, e.g. infant formula, dietary supplements or dietary substitutes for both humans and animals. The compositions are also useful in cosmetic or animal feed formulations. Furthermore, the compositions may also be used as fat free media or as research reagents.
                                                                                                                                                                                                                                                                                                                                  Nucleic acid encoding delta6-acetylenase producing plant oils with increased conte

                                  by (I); (b) an expression cassette (EC) containing (I) linked to one or more regulatory sequences; (c) a vector containing (I) and EC; (d) or ganisms containing (I). EC or the vectors of (c); (e) preparation of unsaturated fatty acids (A) or triglycerides (TG) with increased content of (A) by introducing (I) or EC into an oil-producing organism; (f) protecting (IIa) of 172 aa or 178 aa (given in the specification); (g) production of (A) or TG by using (Ia); and (h) (A) and TG produced by method (g). (I) are used to produce transgenic plants (or other organisms) that produce oils or triglycerides (TG) with increased content of unsaturated fatty acids (A) and to isolate related sequences by homology screening. (A), or TG containing them, are useful in human nutrition (e.g. infant foods), animal feeds, pharmaceuticals and cosmetics. Derivatives of (I), e.g. antisense sequences or ribozymes, can be used to suppress expression of (II), resulting in oils with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ceratodon purpureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  increased
                                                                                                                                                                                                                                            activity.
                                                                                                                                                                                                                                                           polypeptides (II) with Delta6-acetylenase and/or Delta6-desaturase
                                                                                                                                                                                                                                                                       This invention describes a novel isolated nucleic acid (I) encoding

                                                                                                                                                                                                                                                                 This invention describes a novel isolated nucleic acid (I) encoding polypeptides (II) with Delta6-acetylenase and/or Delta6-desaturase activity. The invention also describes (a) amino acid sequences encoded by (I); (b) an expression cassette (EC) containing (I) linked to one or more regulatory sequences; (c) a vector containing (I) and EC; (d) organisms containing (I). EC or the vectors of (c); (e) preparation of unsaturated fatty acids (A) or triglycerides (TG) with increased content of (A) by introducing (I) or EC into an oil-producing organism; (f) proteins (IIa) of I72 and or I78 as (given in the specification); (g) production of (A) or TG by using (Ia); and (h) (A) and TG produced by method (g). (I) are used to produce transgenic plants (or other organisms) that produce oils or triglycerides (TG) with increased content homology screening. (A), or TG containing them, are useful in human polyperiods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid encoding delta6-acetylenase or desaturase, useful for producing plant oils with increased content of unsaturated fatty acids

                                                                                                                                                                                                                     ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              맑
                                                                                                                                                                                                                                                    This invention describes a novel sphingolipid desaturase that selectively clintroduces a double bond into the sphingolase of the ceramide residue of sphingolipids and capnoids. A DNA sequence encoding the sphingolipid content or a vector containing the DNA sequence, can be used to compensed delta-8-unsaturated long-chain base content or an altered content-second delta-8-unsaturated long-chain base cis/trans ratio, especially to compensate for a delta-8-unsaturated long-chain base deficiency, to compensate for a delta-8-unsaturated long-chain base deficiency, to content or an altered content or a delta-8-unsaturated long-chain base deficiency, to compensate for a delta-8-unsaturated long-chain base deficiency, to compensate for a delta-8-unsaturated bases, to increase tolerance content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY51354
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  transgenic plant; crop plant; delta-8-unsaturated long-chain base; tolerance; resistance; soil salinity; ion stress; toxicity; drought; cold; frost; phytopathogenic microorganism; flowering time; cosmetic; pharmaceutical; food; chemical raw material.

                                                                                                                                                              CC (I) by introducing into an organism at least one isolated nucleic acid (II) that encodes a polypeptide (III) with Delta6-desaturase activity. CC Organisms that contain at least 1 wt. 8 (I), on total fatty acid content, CC are then selected. (II) is selected from: (a) a 2012 bp sequence (S1), CC defined in the specification, or its equivalents within the degeneracy of CC the genetic code; or (b) derivatives of the sequence of (a) that encode a CC 525 amino acid polypeptide (S2), defined in the specification, or a CC polypeptide with at least 50% homology with (S2) and practically the same CC enzymatic activity. The invention also describes (I) transgenic organisms CC that contain (II); and (2) oils, lipids and fatty acids produced by the CC enganisms are used in human or animal nutrition, cosmetics, CC pharmaceuticals and agricultural chemicals. (III) can also be used, in CC vitro, for increasing the (I) content of triglycerides. The transgenic CC crganisms have increased contents of (I), or of (I)-containing CC triglycerides, particularly of gamma-linolenic acid.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 The present invention describes polynucleotides, such as complete cDNA sequences and/or sequences of genomic DNA encompassing complete genes, portions of genes, and/or intergenic regions, collectively referred to as sequence-determined DNA fragments (SDFs), from corn plants and Arabidopsis thaliana. The SDFs are promoters, structural genes, untranslated regions (UTRs), or 3' termination sequences. They can be used for expressing a gene product and controlling expression of a target gene, either as a promoter, a structural gene, an UTR or as a 3' termination sequence. They are also useful as tools for genetic mapping, and identification of a particular individual plant or for clustering a group pf plants with a common trait. AAA78433 to AAA78630 and AAB24605 to AAB25099 represent the specifically claimed polynucleotide sequences and polypeptides encoded by them given in the

 This invention describes novel nucleic acid sequences from alkane metabolizing Candida yeasts, encoding cytochrome b5-polypeptide, its fragments, variants and mutations. The nucleic acids and polypeptides are used for the oxidation of long-chain alkyl compounds with at least 10C, and for the production of long-chain dicarbonic acids by oxidizing n-alkanes and fatty acids with at least 10C.
